SUBJECT:

13 lb. Cooling System

MODELS:

Spitfire

The cooling system pressure on the Spitfire MK3 has been increased from 7 lbs. per square inch to 13 lbs. per square inch.

A revised water pump seal is now required to accommodate the increase in pressure. You will also find that the radiator cap is to the 13 lb. per square inch specification and is marked as such.

It is most important that the correct seal is used when overhauling water pumps to the latest condition otherwise water leakage will occur via the seal.
